Green Carbon Intelligence Strategic Plan

AI-Driven Energy Optimization & ESG Compliance Solutions

2026 ACCA National Employment & Future Business Creation Competition

5-Year Revenue Target
160 Million Yuan

Net Profit Margin Target
22%

Target Customers
High-end Manufacturing

JHC2026 Division - Shenzhen - Team Nishen Xiaozongdui - Shenzhen University

Company Overview & Core Challenges

Green Carbon Intelligence

Ningbo Technology Development Co., Ltd.
Founded in 2025, responding to national "Dual Carbon" strategy

Core Capabilities

- AI Algorithm
- Energy Engineering
- ESG Consulting

2025 Key Data

50M
Annual Revenue yuan

6-8
Projects Delivered Annually

Triple Core Challenges

Rising Energy Costs

Complex energy structure, increasing cost reduction pressure

Strict ESG Regulatory Requirements

Increasing demands from regulators and capital markets

Uncertain Digitalization ROI Cycle

AI energy efficiency value requires mid-to-long-term data accumulation

Task 1: ESG Value Cycle Contradiction Analysis

Root Causes of the Contradiction

Time Mismatch

AI models need 3-12 months to verify, customers expect short-term returns

Institutional Conflict

ESG benefits difficult to quantify in financial statements, inconsistent departmental interests

Insufficient Market Maturity

ESG investment still viewed as compliance cost rather than value investment

Impact on GCI

Prolonged Sales Cycle

Multiple stages: technical verification → pilot → financial calculation → procurement

Dilemma in Customer Screening

Difficult to distinguish customers who truly recognize long-term value

Business Model Pressure

Difficult to charge fees matching long-term value, risk of low-price competition

Resolution Strategies

Quantifiable ESG Tool

Convert carbon reduction, compliance, brand into financial value

Diversified Payment

Milestone, EMC, Subscription methods

Task 2: 5-Million-Yuan Project - Milestone Model

Cost Breakdown

Cost Item	Amount myuan	%
Labor Cost	**2.00**	40%
Algorithm Development	**0.60**	12%
On-site Implementation	**0.40**	8%
Direct Cost Total	**3.00**	**60%**
Management Expenses	**0.50**	10%
Sales Expenses	**0.40**	8%
Total Cost	**3.90**	**78%**

Profit Calculation

Operating Revenue	**5.00 million yuan**
Total Cost	**3.90 million yuan**
Profit Before Tax	**1.10 million yuan**
Income Tax 25	**0.275 million yuan**
Net Profit After Tax	**0.825 million yuan**
Net Profit Margin	**16.5%**

Quarterly Cash Flow 40

Period	Revenue	Cost	Net CF	Cumulative
Q1	+2.00	-0.975	+1.025	+1.025
Q2	+1.50	-0.975	+0.525	+1.550
Q3	+1.50	-1.950	-0.450	+1.100
Total	5.00	3.90	+1.10	—

⚠ **Q3 Cash Flow Gap: -450,000 yuan** due to concentrated investment with no new payment

Mitigation Mechanisms

Payment Optimization

Adjust to 40%-40%-20% to reduce final payment risk

Portfolio Management

Sign new projects in Q2/Q3 for revenue relay

Cash Reserve

Maintain at least 600,000 yuan working capital

Credit Evaluation

Assess customer payment ability before signing

Task 2: EMC Model Cash Flow Analysis

Annual Energy-Saving Benefit Calculation

Calculation Steps	Results
1. Customer's Annual Shared Income	840,000 yuan/year
2. Customer's Sharing Ratio	30%
3. Annual Energy-Saving Benefits	2.8 million yuan/year
4. GCI's Sharing Ratio	70%
5. GCI's Annual Income	1.96 million yuan/year
6. 6-Year Cumulative Income	11.76 million yuan

6-Year Cash Flow Analysis

Year	Investment	Revenue	Net CF	Cumulative
Year 0	-5.00	0	-5.00	-5.00
Year 1	0	+1.96	+1.96	-3.04
Year 2	0	+1.96	+1.96	-1.08
Year 3	0	+1.96	+1.96	+0.88
Year 4	0	+1.96	+1.96	+2.84
Year 5	0	+1.96	+1.96	+4.80
Year 6	0	+1.96	+1.96	+6.76

Payback Point: End of Year 3 + 880, 000yuan

Key Assumptions & Insights

Assumption Note

Initial investment assumed at 5 million yuan equaltocontractamount as case data does not specify exact investment

Payback Period

3 Years

Cumulative cash flow turns positive at end of Year 3

Early Stage Pressure

-3.04M

Net cash flow at end of Year 1

Impact on GCI

- If 2 EMC projects run simultaneously, Year 1 net cash flow would be **-6.08 million yuan**
- Annual net profit of GCI is about **8.25 million yuan** $50\text{M} \times 16.5$
- 2 EMC projects would account for **73.8%** of annual profit
- This leads to **extreme cash flow tension**, may require external financing

Task 2: Milestone Model vs EMC Model Comparison

Core Differences

Dimension	Milestone Model	EMC Model
Payment Logic	Pay by project nodes	Share energy-saving benefits
Investment Subject	Customer bears costs	Service provider invests
Risk Bearing	Customer bears demand changes	Service provider bears effects
Revenue Characteristics	One-time, highly volatile	Long-term, sustainable
Cash Flow Pressure	Light early stage	Large initial investment

Advantages & Disadvantages

Milestone Advantages

- Low capital pressure
- High flexibility
- Suitable for start-up stage
- Rapid technology update

EMC Advantages

- High customer acceptance
- Long-term binding $6-10\text{years}$
- Sustainable revenue
- Clear effect orientation

Milestone Disadvantages

- Discontinuous revenue
- Fierce price competition
- Revenue gaps during intervals

EMC Disadvantages

- High capital pressure
- Long payback period $3-5\text{years}$
- Limited scale expansion

Financial Risk Management Strategies

For EMC Model

- **Phased investment:** Divide into "pilot period" and "official period"
- **Capital cooperation:** Partner with financial institutions for equipment financing
- **Customer screening:** Prioritize leading customers with strong willingness

For Milestone Model

- **Portfolio management:** Maintain 3-4 parallel projects for revenue continuity
- **Accelerate acceptance:** Standardize process to shorten payment collection
- **Subscription transformation:** Embed O&M services $10-15$

Comprehensive Strategy

- **Mature customers:** Try EMC model for long-term relationships
- **New customers:** Adhere to milestone model for risk control
- **Future:** Transition to EMC + subscription hybrid model

Task 3: External Environment & Competition Pattern

PESTEL Environment Analysis

Political P

Dual Carbon strategy advances, carbon market compliance pressure increases sharply

Economic E

Energy costs rising, enterprises with excellent ESG have lower financing costs

Social S

ESG investment concept popularized, institutional investors include in decision-making

Technological T

IoT costs decreasing, digital twin improves simulation and optimization accuracy

Environmental E

Carbon emission supervision tightened, extreme climates raise resilience requirements

Legal L

ESG disclosure mandatory, EU CBAM strictly verifies carbon emissions

Four Major Competitor Types

Industrial Automation Giants

Advantages: Brand, full-stack products, strong channels
Weaknesses: High pricing, weak customization, long decision chain

Grid Companies / Energy Providers

Advantages: Customer trust, data entry, capital advantage
Weaknesses: Weak algorithm capability, slow response

AI Software / SaaS Platforms

Advantages: Excellent algorithm models, good product experience
Weaknesses: Lack of engineering implementation capabilities

Traditional Engineering Integrators

Advantages: Localized service, good customer relationships
Weaknesses: Low technical content, difficult to replicate

Competition Pattern Characteristics

- **Red ocean competition:** Four types cover different segments with cross-competition
- **Market dispersion:** No single competitor can meet all needs
- **Low threshold but high barriers:** Core algorithms constitute substantial barriers

Task 3: Differentiated Competitiveness Positioning

Core Capabilities

Capability Dimension	Competitive Value
AI Algorithm & Machine Learning	High
Digital Twin Modeling	High
System Integration	Medium-High
Effect Verification	High

Differentiated Value Proposition

Value Proposition	Description
AI+Engineering Capability	Algorithm + implementation dual capability
Three-in-one Service	Dual Carbon + ESG + Energy integration
Seamless Integration	No system replacement, low investment
Verifiable Effects	30%+ carbon reduction, 10-30% energy saving

Effect Verification

30%+
Carbon Reduction

10-30%
Energy Saving

SWOT Analysis Matrix

Strengths
- Technology leadership
- Cross-industry experience
- AI+Engineering capability

Opportunities
- Policy-driven demand
- Growing ESG market
- Manufacturing transformation

Weaknesses
- Weak brand influence
- Small market scale
- Limited capital strength

Threats
- Giant competition
- Price wars
- Technology iteration

Target Customer Focus

Customer Type	2025	2030	Positioning
High-end Manufacturing	55%	65%	Strategic
Industrial Parks	30%	25%	Quality
Public Buildings	15%	10%	Demo

Task 4: Strategic Vision & Market Selection

Strategic Vision

Wisely Control Energy, Benefit Ten Thousand Enterprises

Help industrial enterprises achieve energy saving, cost reduction, ESG compliance and sustainable development through AI algorithm and energy engineering integration

2030 Strategic Goals

160	35.2	22%
Million Yuan Revenue	Million Yuan Net Profit	Net Profit Margin

Geographic Market Strategy

1. **2026-2027**
   Yangtze River Delta + Pearl River Delta · Deeply cultivate existing customers
2. **2028-2029**
   East China + Central China + Southwest China · Expand new regions
3. **2030**
   Southeast Asia Pilot · Follow manufacturing enterprises overseas

Industry Focus Strategy

Lithium Battery 35%

High prosperity · High energy density · 20-30% energy saving

Photovoltaic 25%

Fierce competition · High cost pressure · Strong ESG demand

New Energy Vehicles 15%

Rapid growth · Many factory renovations

Semiconductor 10%

High added value · Precision temperature control

Traditional Manufacturing 15%

Large base · Carbon market pressure transmission

Customer Selection Criteria

Class A Strategic

Annual electricity > 100M kWh
Listed companies/Leaders
Clear ESG disclosure requirements

Class B Quality

Annual electricity 50-100M kWh
Energy-saving budget
Good payment credit

Class C Cultivation

Willingness to save energy
Limited budget
Acceptable pilot mode

Task 4: Business Design & Revenue Structure

Revenue Structure Evolution

Pricing Strategy

Large Energy Efficiency Projects	5-20 Million Yuan
Medium Energy Efficiency Projects	2-5 Million Yuan
SaaS Platform Subscription	50-200K Yuan/Point/Year
ESG Consulting	300K-1M Yuan
Operation & Maintenance Services	10-15% of Contract

Productization Path & Business Portfolio

Productization Roadmap

2026
Extract General Algorithm Modules
Project Reuse Components

2027
Develop Industry Solution Packages
Standardization + Customization

2028
Launch SaaS Platform
Cloud Subscription Service

2029-2030
Platform Ecosystem
Open API, Industry Plugins

Business Portfolio Strategy

Cash Cow
Energy Efficiency Optimization Projects
2030 Revenue Share 40%

Growth Engine
SaaS Platform Subscription
2030 Revenue Share 35%

Customer Acquisition Entry
ESG Consulting Services
2030 Revenue Share 10%

Stickiness Guarantee
Operation & Maintenance Services
2030 Revenue Share 15%

Task 4: 5-Year Quantitative Development Plan

Revenue & Profit Targets 2026 – 2030

Year	Revenue myuan	Growth	Profit Margin	Net Profit myuan
2025 Base	50	—	15%	7.50
2026	55	+10%	16%	8.80
2027	70	+27%	17%	11.90
2028	90	+29%	18%	16.20
2029	120	+33%	20%	24.00
2030	160	+33%	22%	35.20

5-Year Revenue Growth

3.2x

From 50M to 160 million yuan

Net Profit Margin

15% → 22%

Annual Growth Rate

10-33%

Accelerated growth from 2028

Revenue Structure Evolution

Revenue Type	2025	2027	2030
Project-based	32.5M 65	38.5M 55	64M 40
Subscription	5M 10	14M 20	56M 35
O&M Services	2.5M 5	7M 10	24M 15
ESG Consulting	10M 20	10.5M 15	16M 10

Transformation Logic

Project-based revenue is current main source but limited by personnel; subscription model is replicable with low marginal cost, key to valuation improvement

Growth Rate Note

Slow growth in 2026-2027 due to productization transformation; accelerated growth from 2028 with SaaS platform maturity

Capability Improvement & Risk Response Strategies

Capability Improvement Framework

Capability Dimension	Current Status	Target Status
Project Management & Delivery	Relies on core team	**Standardized, replicable**
Algorithm & Technology Platform	Single project reuse	**Platform-based, productized**
Customer Service & Success	Passive response	**Active value operation**
Organization & Management	Flat and efficient	**Professional, process-oriented**

Key Capability Improvement Plan

Project Management

- Establish standardized process
- Build knowledge base
- Train 5 senior PMs in 3 years

Algorithm Platform

- R&D expenses 15-20%
- Modularize algorithms
- Develop SaaS platform by 2028

Customer Success

- ABC customer stratification
- Health score model
- Recruit 2-3 CSMs

Organization

- OKR + KPI system
- Introduce CRM, ERP
- Digital office by 2027

Major Risks & Response Strategies

Risk Type	Specific Risks	Response Strategies
Market	Slow progress of carbon market policies	Diversify revenue sources, strengthen independent energy-saving demand
Competition	Industrial giants price wars intensify	Differentiated focus, industry deep cultivation
Technical	Core algorithms surpassed by competitors	Continuous R&D investment, maintain technological leadership
Operational	Project delivery quality decline	Establish quality control system
Capital	**Cash flow tension during expansion**	**Control expansion pace, maintain 6-month cash reserve**

Key Success Factors

Benchmark Customer Breakthrough | **Productization Transformation** | **Cash Flow Balance** | **Talent Team Building**

Risk Impact Level

High: Competition, Operational
Medium: Market, Technical

Implementation Timeline

- Q1-Q2 2026: System setup
- 2026-2028: Capability building

Conclusion & Future Outlook

Four Strategic Directions

1 Focus on High-end Manufacturing

Lithium battery, photovoltaic, new energy vehicles as strategic industries

2 Accelerate Productization Transformation

Evolve from customized projects to "product + subscription" model

3 Build Differentiated Barriers

Strengthen "AI algorithm + engineering implementation" dual capabilities

4 Steady Expansion

Maintain healthy cash flow and profit margin

Core Achievement Goals

5-Year Revenue Growth

3.2x

From 50M to 160 million yuan

Net Profit Margin Increase

15% → 22%

Net profit reaches 35.2 million yuan

Future Vision

Become a leading enterprise in energy efficiency optimization for high-end manufacturing, promoting green transformation of industrial enterprises and achieving sustainable development
